## Summary: Ethnicity

### **Definition**

Ethnic background or association of a person.

### **Data Storage and Field Values**

The Ethnicity data concept consists of a minimum of 1 data element, which serves as a 1-character variable indicator for ethnicity. The variable name noted below specifically applies to the Ethnicity of the subject of the report. Variable names for other uses of Ethnicity, such as Ethnicity of the subject's partner, are not discussed in this document but will be discussed in subsequent releases.

Variable Name:	HISPANIC
Type:	character
Length:	1
Reported to CDC:	Yes
Field Values:	Y – Yes (indicates <i>Hispanic or Latino</i> )
	N – No (indicates <i>Not Hispanic or Latino</i> )

An optional CIPHER extended ethnicity data element can be used to support collection of more detailed information, in standardized coded format, on ethnicity. NOTE: A table of extended ethnicity codes and categories titled "CDC/Census Ethnicity Classification", can be found on page 15 of this section. The optional CIPHER extended ethnicity race data element is described below:

Variable Name:	HISP_EXT
Type:	character
Length:	6
Reported to CDC:	Yes
Field Values:	Refer to CDC/Census Ethnicity Classification in this section

### **Missing Values**

If the value of the Ethnicity data element is missing, or does not adhere to the CIPHER standard, the data element may be noted as blank to indicate a missing value. If the program requires the reason the value is missing, use a separate 1-character field to denote the rationale behind the missing data.

In addition, a separate 1-character field can be used for the optional extended Ethnicity data element if a program has chosen to make use of this element, and if the program requires collection of a reason that the value for an extended Ethnicity data element is missing.

The use of a Missing Value Reason data element must adhere to the CIPHER definition and rules associated with missing data as described in Appendix I - Missing Value Reason.

### **Processing Overview**

Special requirements apply. Refer to the Implementation subsection on Data Processing: Validations and Edit Checks, below, for detailed information.

### **Discussion**

The CIPHER Ethnicity data concept is influenced by the revised (1997) Federal Office of Management and Budget (OMB) Directive-15, and the Ethnicity standards supplied in the HISSB Standards and Liaison Committee's Common Data Elements Guide. The Ethnicity concept consists of one data element, which serves as a 1-character variable indicator for the OMB-defined minimum ethnicity categories of *Hispanic or Latino* and *Not Hispanic or Latino*. The data element, called HISPANIC, is formatted as a Yes/No

type variable in which valid values are 'Y' for Yes, and 'N' for No. A value of 'Y' in HISPANIC is an indicator of the ethnicity category *Hispanic or Latino*. A value of 'N' in HISPANIC is an indicator of the ethnicity category *Not Hispanic or Latino*.

Similarly, the collection of Ethnicity data is approached in a check-box type format in which one of the following ethnicity categories can be marked/checked off:

*Hispanic or Latino*  
*Not Hispanic or Latino*

Selection of the category *Hispanic or Latino* results in the entry/storage of 'Y' in the HISPANIC data element. Selection of the category *Not Hispanic or Latino* results in the entry/storage of 'N' in the HISPANIC data element.

In addition, programs have the option to collect more detailed extended ethnicity information when the ethnicity category is noted as *Hispanic or Latino* (HISPANIC='Y'). These extended ethnicity categories are defined based on the revised (1997) Federal OMB Directive-15, and the Ethnicity standards supplied in the HISSB Standards and Liaison Committee's Common Data Elements Guide. As described in these existing standards, a unique 6-digit identifier (formatted as ####-#) is assigned/associated with each extended ethnicity category. The extended ethnicity data element (HISP\_EXT) is activated only if the program has opted to collect/support these additional data and only if the associated Ethnicity data element (HISPANIC) is set to 'Y', indicating an ethnicity of *Hispanic or Latino*.

A table of extended ethnicity concept codes and categories supported within CIPHER (the CDC/Census Ethnicity Classification) is at the end of this section. The code set is compatible with but more detailed than the Race categories specified in the federal standards established by the U.S. Office of Management and Budget (OMB), and lends itself for use in electronic messages that comply with HL7 and other communications standards. The concepts included in the CDC/Census Classification table encompass the minimum OMB categories (described above) and a more detailed set of OMB-compatible categories provided by the U.S. Bureau of the Census. For each concept, a unique 6-digit identifier and a hierarchical code are provided. Synonyms are included as needed.

As described above, collection/storage of the basic OMB ethnicity categories (Hispanic or Latino, and Not Hispanic or Latino) does not use the unique 6-digit identifier codes. Rather, CIPHER approaches the collection of the minimum categories through use of a Yes/No data element. In contrast, collection/storage of the optional extended ethnicity categories associated with each of the minimum OMB categories involves the use of the unique 6-digit identifier codes described in the CDC/Census Ethnicity Classification table.

---

However, in the area of Electronic Data Interchange, both basic Ethnicity data and extended Ethnicity data are represented using the unique 6-digit identifier codes, to structure electronic messages that comply with HL7 and other communication standards.

**EDI Summary**

NOTE: All Ethnicity-related data will be formatted using the appropriate set of unique identifier codes noted in the CDC/Census Ethnicity Classification table prior to any type of electronic data interchange.

The remainder of the EDI section is under construction.

## Implementation: Ethnicity

The implementation examples noted below specifically apply to the Ethnicity of the subject of the report. The implementation for other uses of Ethnicity, such as Ethnicity of the subject's partner, can be patterned after these implementation examples.

### **Data Collection: Hardcopy Report Form**

Check-box fields on the hardcopy report form are used for the collection of Ethnicity data. The reporter can check or mark the box noting 'Y' for Hispanic or Latino or 'N' for Not Hispanic or Latino. Refer to Figures 1 and 2 below.

In addition, programs have the option to collect detailed extended Ethnicity data. The extended Ethnicity categories are described in the CDC/Census Ethnicity Classification table included at the end of this section. NOTE: A unique 6-digit identifier code is associated with each extended ethnicity category. Because the list is so extensive, an index of these standard extended ethnicity codes/categories will be accessible through a separate hardcopy reference. The reporter may choose to note the extended ethnicity category description and/or the extended ethnicity category unique identifier on the physical hardcopy form. Refer to Figures 3 through 5 for examples of hardcopy forms used to collect the optional extended Ethnicity data.

**Figure 1:** Blank Hardcopy Form section used to collect minimum Ethnicity data

<b>Ethnicity</b> (select one)	
<input type="checkbox"/>	Y - Hispanic or Latino
<input type="checkbox"/>	N - Not Hispanic or Latino

**Figure 2:** Completed Hardcopy Form section used to collect Ethnicity data

<b>Ethnicity</b> (select one)	
<input checked="" type="checkbox"/>	Y - Hispanic or Latino
<input type="checkbox"/>	N - Not Hispanic or Latino

**Figure 3:** Blank Hardcopy Form section used to collect minimum Ethnicity data, and extended Ethnicity data

<b>Ethnicity</b> (select one)	<input type="checkbox"/>	Y - Hispanic or Latino Specify: _____
	<input type="checkbox"/>	N - Not Hispanic or Latino

**Figure 4:** Completed Hardcopy Form section used to collect minimum Ethnicity data, and extended Ethnicity data using textual description

<b>Ethnicity</b> (select one)	<input checked="" type="checkbox"/>	Y - Hispanic or Latino Specify: Puerto Rican
	<input type="checkbox"/>	N - Not Hispanic or Latino

**Figure 5:** Completed Hardcopy Form section used to collect minimum Ethnicity data plus extended Ethnicity data using code and description

<b>Ethnicity</b> (select one)	<input checked="" type="checkbox"/>	Y - Hispanic or Latino Specify: Puerto Rican 2180-8
	<input type="checkbox"/>	N - Not Hispanic or Latino

### Missing Values – Hardcopy Form

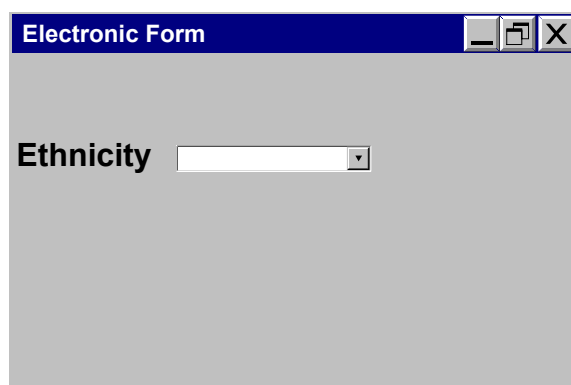

Examples of hardcopy forms using the associated Missing Value Reason data element can be found in Appendix I – Missing Value Reason. The hardcopy form need only contain a missing value reason if the program requires the rationale for a missing value for Ethnicity.

### Data Entry: Electronic Forms

A pull-down menu displays the valid entry options, which parallel the options noted on the collection report form ('Y' for Hispanic or Latino, 'N' for Not Hispanic or Latino). The portion of the entry options noted outside the parentheses reflects the data that are stored. Only the 'Y' or 'N' is stored in a database with the associated Ethnicity data element. Refer to Figures 6 through 8 below for examples of electronic entry forms used to enter the minimum Ethnicity concept data.

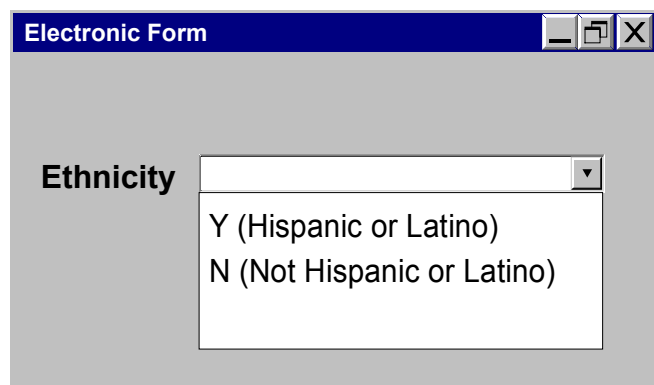

In addition, programs have the option to collect detailed extended Ethnicity information. The extended Ethnicity categories are described in the CDC/Census Ethnicity Classification table included at the end of this section. NOTE: A unique 6-digit identifier code is associated with each extended Ethnicity category. When a 'Y' is entered in the main Ethnicity field, indicating Hispanic or Latino, the extended Ethnicity data field is displayed along with a pull-down menu noting the valid entry options. These options parallel the options noted on in the CDC/Census Ethnicity Classification table. The portion of the valid entry options displayed outside the parentheses reflects data that are stored in the extended ethnicity data element, specifically the **6-digit unique identifier**. Refer to Figures 9 through 11 for examples of electronic forms used to collect the optional extended Ethnicity data.

**Figure 6:** Blank Electronic Form used to collect Ethnicity

The image shows a screenshot of a software window titled "Electronic Form". The window has a standard Windows-style title bar with minimize, maximize, and close buttons. The main content area of the window is light gray. In the upper left portion of this area, the word "Ethnicity" is displayed in a bold, black font. To the right of the text is a white rectangular pull-down menu box with a small downward-pointing arrow on its right side.

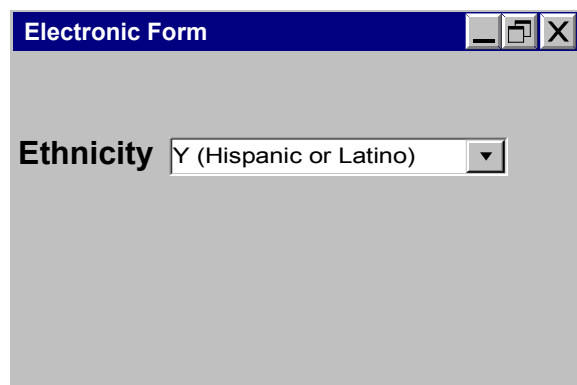

**Figure 7:** Blank Electronic Form used to collect Ethnicity, pull-down menu enabled

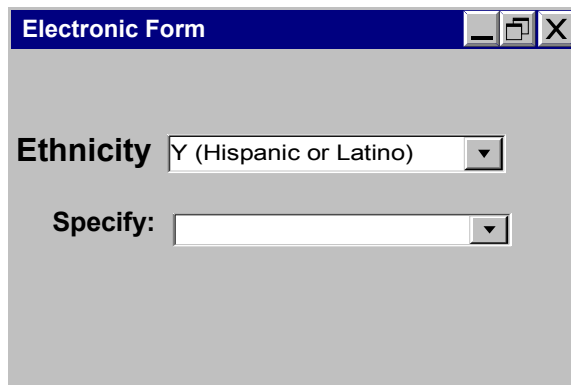

The screenshot shows a window titled "Electronic Form" with a standard Windows-style title bar (minimize, maximize, close buttons). Inside the window, the label "Ethnicity" is positioned to the left of a pull-down menu. The menu is currently open, displaying two options: "Y (Hispanic or Latino)" and "N (Not Hispanic or Latino)".

**Figure 8:** Completed Electronic Form used to collect Ethnicity

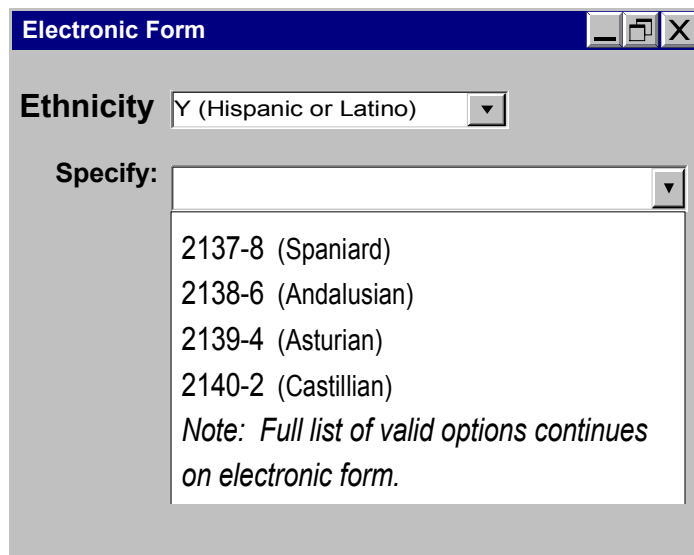

The screenshot shows the same "Electronic Form" window. The "Ethnicity" pull-down menu is now closed, and the selected option, "Y (Hispanic or Latino)", is displayed within the menu's text field. The rest of the form area is empty.

**Figure 9:** Electronic Form used to collect extended Ethnicity data

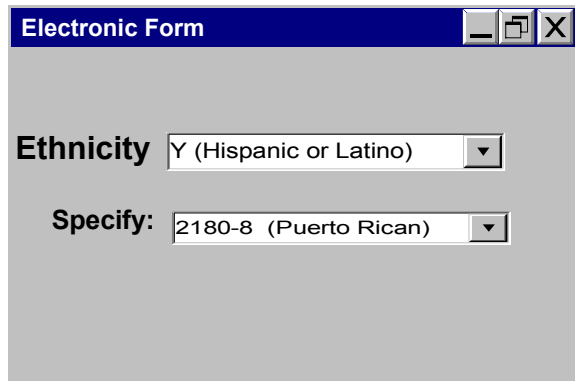

The screenshot shows a window titled "Electronic Form". Inside, there is a label "Ethnicity" followed by a dropdown menu showing "Y (Hispanic or Latino)". Below this is a label "Specify:" followed by an empty dropdown menu.

**Figure 10:** Blank Electronic Form used to collect extended Ethnicity data, pull-down menu enabled

The screenshot shows the same "Electronic Form" window. The "Specify:" dropdown menu is now open, displaying a list of options: "2137-8 (Spaniard)", "2138-6 (Andalusian)", "2139-4 (Asturian)", and "2140-2 (Castillian)". Below the list, there is a note: "Note: Full list of valid options continues on electronic form."

**Figure 11:** Completed Electronic Form used to collect extended Ethnicity dataThe image shows a screenshot of a software window titled "Electronic Form". Inside the window, there are two dropdown menus. The first dropdown is labeled "Ethnicity" and its selected value is "Y (Hispanic or Latino)". The second dropdown is labeled "Specify:" and its selected value is "2180-8 (Puerto Rican)". The window has a standard Windows-style title bar with minimize, maximize, and close buttons.

### Missing Values – Electronic Form

Examples of electronic forms using the associated Missing Value Reason (MVR) data element can be found in Appendix I – Missing Value Reason. The electronic form needs to handle the Missing Value Reason only if the program requires the reason for a missing value for Ethnicity. If the user selects an MVR code during data entry, the Ethnicity field will be blank and the screen will display the MVR information next to the blank field.

### Data Processing: Validations and Edit Checks

Data elements entered in the electronic form will be edited as outlined below. If the program elects to use an associated Missing Value Reason data element for Ethnicity, it will be edited as outlined in Appendix I – Missing Value Reason.

#### **Ethnicity:**

- Alpha only
- A single Yes/No type variable is used to support the Ethnicity data concept. A value of 'Y' (Yes) indicates that the Ethnicity category is *Hispanic or Latino*. A value of 'N' (No) indicates that the Ethnicity category is *Not Hispanic or Latino*.
- **Ethnicity** data are to be collected in conjunction with **Race** data. Further, ethnicity data are to be noted and collected **before** Race data. Please refer to the Race section for detailed information on Race data.
- The extended Ethnicity data element (HISP\_EXT) is activated when the following conditions are met:
  - a) A program chooses to collect more detailed information on Ethnicity, and
  - b) The associated Ethnicity data element (HISPANIC) has been marked with a 'Y' (Yes) indicating *Hispanic or Latino*.

### **Data Processing: From Hardcopy to Storage – minimum Ethnicity data**

The following example illustrates the flow of information from data collection on the hardcopy form, to data entry into the electronic form, to validations and storage in the database.

The process begins with the blank Hardcopy data collection form used to collect Ethnicity:

The Ethnicity information is captured on the form, creating a completed Hardcopy data collection form:

The process continues with a blank Electronic form/data entry screen used to capture Ethnicity:

The value from the hardcopy form is entered into the Electronic form/data entry screen with the use of a drop-down list of valid values, and then the edits and validations are performed on Ethnicity:

The completed Electronic form/data entry screen is redisplayed and Ethnicity is stored in the database:

**Electronic Form**

**Ethnicity:** Y (Hispanic or Latino) ▼

<b>Database Storage</b>	
Variable:	<i>hispanic</i>
Type:	character
Length:	1
Stored Value:	<b>Y</b>

**Data Processing: From Hardcopy to Storage – minimum Ethnicity data and extended Ethnicity data**

The following example illustrates the flow of information from data collection on the hardcopy form, to data entry into the electronic form, to validations and storage in the database.

The process begins with the blank Hardcopy data collection form used to collect Ethnicity and extended ethnicity data:

The Ethnicity information is captured on the form, creating a completed Hardcopy data collection form:

The process continues with a blank Electronic form/data entry screen used to capture Ethnicity:

The value from the hardcopy form is entered into the Electronic form/data entry screen with the use of a drop-down list of valid values, and then the edits and validations are performed on Ethnicity:

The completed Electronic form/data entry screen is redisplayed and Ethnicity is stored in the database, along with extended ethnicity data:

The screenshot shows a window titled "Electronic Form". Inside, there are two dropdown menus. The first is labeled "Ethnicity:" and has the value "Y (Hispanic or Latino)" selected. The second is labeled "Specify:" and has the value "2180-8 (Puerto Rican)" selected. Below these menus is a diagram consisting of a curved arrow pointing to a cylinder representing a database. To the right of the cylinder is a box titled "Database Storage" containing the following information:

Variable:	<i>HISPANIC</i>
Type:	character
Length:	1
Stored Value:	<b>Y</b>
Variable:	<i>HISP_EXT</i>
Type:	character
Length:	6
Stored Value:	<b>2180-8</b>

### **Data Transmission: Electronic Data Interchange**

NOTE: All Ethnicity-related data will be formatted using the appropriate set of unique identifier codes noted in the CDC/Census Ethnicity Classification table, prior to any type of electronic data interchange.

The remainder of the EDI section is under construction.

**CDC/Census Ethnicity Classification**

Unique Identifier	Hierarchical Code	Concept
2133-7	E	Ethnicity
2135-2	E1	Hispanic or Latino
2137-8	E1.01	Spaniard
2138-6	E1.01.001	Andalusian
2139-4	E1.01.002	Asturian
2140-2	E1.01.003	Castillian
2141-0	E1.01.004	Catalonian
2142-8	E1.01.005	Belearic Islander
